PerioCream Periodontal Paste

- - Applied by Dental professionals

Swiss Made

- Protective layer
- Pain reduction
- Helps reduce bleeding
- Enhances patient comfort
- Applied by Dental professionals

Introducing PerioCream – a professional adjunct to post-scaling and root planing (SRP) treatement. This advanced periodontal paste, applied by the dentist following SRP treatment on the gum line, is designed to protect and promote healing of the gums and it can last up to 3 hours on the patient's gums, by the end of which it should have completely dissolved. Delivered in convenient, prefilled, ready-to-use syringes – no mixing required, PerioCream acts as a mechanical barrier, isolating treated areas to prevent bacterial recolonization and help reduce bleeding. Clinically proven to significantly reduce post-treatment pain, it enhances patient comfort and improves the overall SRP experience.
