

Olivafix® Gold: Showcasing Our Pioneering R&D in Denture Adhesives

Ghent (Belgium), 18 July 2024, 6:00 a.m.; **bonyf NV (Mnemonic: MLBON)**, the next-generation oral comfort expert, is a Euronext Paris listed company and specializes in the development, production and marketing of oral, denture, orthodontic and wound care products, is excited to highlight the exceptional capabilities of our Research and Development (R&D) team, whose innovative work has brought Olivafix® Gold to the forefront of denture adhesive technology.

Olivafix® Gold, currently available in select countries, represents the next generation of denture fixative creams. It is the only product in the world to achieve such remarkable results through extensive R&D. Multiple studies conducted by renowned universities have published extremely positive results, validating our product's effectiveness and safety.

The primary objective of this project was to eliminate the use of petroleum derivatives, which constitute approximately 30% of most denture fixatives. We have successfully replaced these components with healthy, organic Extra virgin olive oil. This endeavor took over five years of meticulous research and fine-tuning to perfect the formula we have today.

Our CEO, Jean-Pierre Bogaert, expresses immense pride in the team for accomplishing this nearly impossible task. "We are truly the most advanced innovator of denture fixative in the world, and our primary goal has always been to improve the quality of life for our customers," he stated.

In addition to eliminating petroleum derivatives, we have completely removed zinc from our formula. This is a significant advancement, as improper use of zinc-containing products has been linked to neurological problems in some cases.

The proven safety of this innovative product did not impact its effectiveness; on the contrary, the performance is exceptional, with up to 24 hours* of holding time.

*Up to 24 hours for full upper dentures and strong hold for lower dentures.

With Olivafix® Gold, we are making significant strides in providing a safer and more effective solution for denture wearers. Currently available in select countries, we plan to expand its availability to other parts of the world soon.
